# Contributing to Strix

Thank you for your interest in contributing to Strix! This guide will help you get started with development and contributions.

## Development Setup

### Prerequisites

- Python 3.12+
- Docker (running)
- Poetry (for dependency management)
- Git

### Local Development

#### 1. Clone the repository

```
git clone https://github.com/usestrix/strix.git
```

```
cd strix
```

## 2. Install development dependencies

```
make setup-dev
```

```
# or manually:
```

```
poetry install --with=dev
```

```
poetry run pre-commit install
```

## 3. Configure your LLM provider

```
export STRIX_LLM="openai/gpt-5"
```

```
export LLM_API_KEY="your-api-key"
```

## 4. Run Strix in development mode

```
poetry run strix --target https://example.com
```

# Contributing Prompt Modules

Prompt modules are specialized knowledge packages that enhance agent capabilities. See [strix/prompts/README.md](https://github.com/usestrix/strix/blob/main/prompts/README.md) for detailed guidelines.

## Quick Guide

1. Choose the right category ( /vulnerabilities , /frameworks , /technologies , etc.)
2. Create a .jinja file with your prompts
3. Include practical examples - Working payloads, commands, or test cases
4. Provide validation methods - How to confirm findings and avoid false positives

## Pull Request Process

1. Create an issue first - Describe the problem or feature
2. Fork and branch - Work from the main branch

3. **Make your changes** - Follow existing code style
4. **Write/update tests** - Ensure coverage for new features
5. **Run quality checks** - `make check-all` should pass
6. **Submit PR** - Link to issue and provide context

## PR Guidelines

- **Clear description** - Explain what and why
- **Small, focused changes** - One feature/fix per PR
- **Include examples** - Show before/after behavior
- **Update documentation** - If adding features
- **Pass all checks** - Tests, linting, type checking

## Code Style

- Follow PEP 8 with 100-character line limit
- Use type hints for all functions
- Write docstrings for public methods
- Keep functions focused and small
- Use meaningful variable names

## Reporting Issues

---

When reporting bugs, please include:

- Python version and OS
- Strix version
- LLMs being used
- Full error traceback
- Steps to reproduce
- Expected vs actual behavior

## Feature Requests

---

We welcome feature ideas! Please:

- Check existing issues first
- Describe the use case clearly

- Explain why it would benefit users
- Consider implementation approach
- Be open to discussion

## Community

---

- Discord: [Join our community](#)
- Issues: [GitHub Issues](#)

## Recognition

---

We value all contributions! Contributors will be:

- Listed in release notes
- Thanked in our Discord
- Added to contributors list (coming soon)

Questions? Reach out on [Discord](#) or create an issue. We're here to help!
